

# Isobus terminal

**The Amatron 3 Isobus terminal by Amazone (Germany) enables to control and operate other implements, which are not yet Isobus-compatible, as well as all kind of Isobus-connectable machines.**

The terminal combines the Amatron+ characteristics and functionality in one housing with a new look. Thus Amatron 3 is the ideal terminal for all those, who intend to supplement their current Amazone machinery range with some Isobus-equipped machinery in the future, said the company. They also say, due to its handling and its back-lit keys, the terminal is operator-friendly.

For monitoring the system, a contrast, and anti-glare display is utilized. The functions GPS-Switch, GPS-Track, and GPS-Maps are already pre-installed so that no additional software is needed. Users can initially make use of these applications for 50 hours free of charge. Only then they need to decide if they wish any of them to be permanently activated.
