

## Panel PC with 7-inch TFT

**The RPi-07 by Mass is a Raspberry Pi-3 panel PC. It comes in an aluminum housing and contains multi-touch LCD with a resolution of 800 pixels by 400 pixels.**

□

The product measures 200 mm x 118 mm x 48 mm and weighs about 0,9 kg (Photo: Mass)

The CPU board includes the latest Raspberry Pi version 3B with a 1,2-GHz Cortex-A53 micro-controller. For the panel PC several extension boards are available. This includes a CAN interface board. Other available interfaces are USB, LAN, Ethernet, I<sup>2</sup>C, and EIA-232. The product needs an input voltage of 12 V<sub>DC</sub> or 24 V<sub>DC</sub>. Also there are external power supplies available for different voltages. The panel computer is equipped with a Vesa-75 fastening to add a pivot arm or foot; alternatively there is a holding clamp available for mounting in front panels. The product comes with the Raspbian operating system or Microsoft's Windows 10 IoT core. They are installed on the Micro-SD card.
