

CONNECTOR

Adapting 9-pin D-sub to RJ45 connectors

Schneider-Electric offers a connector adaptor for its Altivar drives with CANopen connectivity.

(Photo: Schneider Electric)

The adaptor provides on one side a 9-pin D-sub connector with pinning as specified in CiA 303-1. On the other side it features an RJ45 connector, which also complies with CiA 303-1. Both connectors are plugs. They are IP20-rated. The French enterprise provides an 18-month warranty period.

The VW3CANA71 connector adaptor was originally intended for the Altivar family of variable speed drives coming with a CANopen interface. But you also can use for other CANopen devices.
