

For fleet-management systems

Inventure (Hungary) has introduced a contactless adapter for Classical CAN networks, which is compatible with the company's FMS (fleet-management system) gateway.

The contactless adapter can be connected to the FMS gateway (Photo: Inventure)

During the development of the "Contactless CAN sensor" adapter, the provider took care that the product is not only compatible with its FMS gateway but with other telematics boxes. Additionally, the company offers a contactless adapter for J1708. The Classical CAN adapter is linked to the FMS gateway via a 1,5-m cable, which can be extended up to 20 m. The non-intrusive connection method is suitable for CAN bit-rates ranging from 50 kbit/s to 1 Mbit/s. The adapter measures 35 mm x 35 mm x 15 mm. Modes are displayed by means of LEDs (stand-by, communication, reverse data polarity, and overheat).

Inventure Automotive Electronics has been established in 1997 with the aim to develop products for automotive electronics. The Hungarian company is specialized in development and production of automotive measuring instruments and ECUs. The main areas of the activities are own product developments and development services. The company cooperates with the Budapest University of Technology and Economics.
