

SPS 2019

CANopen direct drives

Halstrup-Walcher is part of the SPS 2019 fair in Nuremberg, Germany. They show its PSD direct drives which are available with CANopen and other interfaces.

The PSD direct drives are available with CANopen, IO Link, Profinet, and Ethercat (Source: Halstrup-Walcher)

The drives are compatible with four bus systems altogether: CANopen, IO Link, Profinet, and Ethercat. Other bus interfaces are realized on request. The PSD product range has numerous models and options. Along with the compatible bus interface, the maximum torque, IP protection class, connector alignment, and the optional hollow shaft can be selected. The step motors with Nema 17 and 23 reach up to 1000 rotations per minute. Subsystems for automatic format changeover are already integrated in the drives. The direct drives are thus suited to frequent format changeovers in machines. The company is exhibiting the PSD product range at the SPS in Nuremberg, at booth 131, in hall 4.
