SPS 2019

AEF certification for Isobus products

In order to guarantee the compatibility of the different Isobus participants, B-plus' Isobus products are all certified by AEF. Here are the latest ones.

(Source: B-Plus)

B-Plus is a member of the international organization AEF and develops various Isobus solutions for the use in mobile machines and implements. In order to guarantee the compatibility of the different Isobus participants, the company's Isobus products are all certified by AEF.

As the newest device of the Isobus family, the B-Isobus I/O gateway has now also been certified. The controller brings agricultural equipment into the Isobus world. The gateway has five freely configurable inputs and six configurable outputs. It supports the functionalities of the Virtual Terminal Client, AUX-N, and Taskcontroller including Section Control.

In August, the B-Isobus CAN gateway was extended by the Taskcontroller functionality and was successfully certified. The CAN gateway can extend existing implement controls and thus enables to convert the data of a CAN system, that is not Isobus-capable, to Isobus and to read out the Isobus information.

B-Plus is part of the SPS 2019 in Nuremberg, Germany from November 26 to November 28 in hall 7, stand 350. They will show these products.
