

9-INCH CAR RADIO

Multimedia for VW, Seat, and Skoda

Zenec introduced the Z-E2055 touchscreen car radio with a 9-inch glass display. Some comfort functions from the CAN in-vehicle networks can be displayed and accessed.

To use the Apple Carplay and Google Android Auto functions a mobile phone can be connected via a USB port. Access to applications such as navigation, media player, or messenger services is given. Control of device functions is possible via the capacitive glass display or by voice input using the Apple Siri or Google Assistant. In addition, there are tools to optimize the sound. An audio DSP (digital signal processor) with 5-channel time alignment for individual adjustment of the speaker channels, an 8-band graphic equalizer, and an active crossover with selectable 12-dB/octave or 24-dB/octave high- and low-pass filters.

Digital radio sound is provided by the DAB+ (digital audio broadcasting) tuner. The tuner offers such comfort functions as MOT slideshow, DLS text, DAB-DAB Service Following, and Comfort Scan. The FM RDS tuner ensures good reception from conventional FM stations in regions inadequately covered by the DAB+ network, said the company. The integrated Bluetooth 4.2 module offers hands-free functions for contact management of phone books. A wireless music streaming is possible as well.

The radio can be integrated in diverse VW, Seat, inf and Skoda models. Available functions include DAB+, Apple Carplay, and Android Auto. Interfaced with the vehicle electronics via the CAN network, the radio supports comfort functions such as MFA/MFA+ (multi-function displaying), multi-function steering wheel connection, and the display of OPS (optical parking system) and Climatronic.

Zenec Z-E2055 is tailored for integration in vehicles based on the Golf 5 and Golf 6 platforms (Source: Zenec)
