

ESX safety and standard I/O module

- The ESX controller family from Sensor-Technik Wiedemann (STW) for safety and standard applications comprises the proven third as well as the innovative fourth generation.

With the upcoming fourth generation STW relies on a new processor platform, the Infineon Aurix, which is available in different variants. Therefore a new platform concept arises that will be seen not only in control units and I/O modules of the fourth generation, but also in intelligent sensors.

The ESX IO-Modules are available as standard versions and variants of which in future also safety certified according to SIL2 / PLd.

Special features

- Standard portfolio of control units and IO-Modules
- Future-proof through modular structure on common platform

Products

ESX.3ios, ESX.iox, ESX.mbc, ESX.4cm-a
